DATA SCIENCE

Machine Learning For All With Python

(ডেটা সাইন্স) কীভাবে ধাপে ধাপে PYTHON, মেশিন লার্নিং শিখবেন ??

Instructor

Rashedul Alam Shakil
M.Sc. in Data Science
Friedrich–Alexander University, Germany
Founder, AI QUEST & STUDY MART
Email: hq@aiquest.org
To Enroll: 01704265972

STUDY MART AI Quest

Benefits

Have a look ->

- Teach Basic Python & Strongly Focus on Mathematics and Statistics Behind Machine Learning Algorithms.
- Work With Real Data & Implement With Python.
- Daily Assignment for Students & Live Projects.
- Facebook Group to Discuss Any Topic Related to The Course or DATA SCIENCE.
- After Completing the Course, We Will Provide You the Certificate.
- Life-time Support For All Students.

Join Now: https://www.facebook.com/groups/StudyMart | Subscribe: https://www.youtube.com/studymart

Module 01: Introduction & Basic Python	
Class 01	Important Discussion on: • What is Data Science? • What is Machine Learning? • Data Science Venn Diagram. • Differences between Data Science, Machine Learning and Deep Learning. • Why Python for Data Science. • Python vs R. • Future of Data Science. • Why Machine Learning so popular? • Types of Learning in ML. • Supervised Learning. • Unsupervised Learning. • Supervised vs Unsupervised. • All about ML Algorithms. • Data Science Job Market.
Class 02	Software Installation: • Python • Jupyter Notebook Basic Python: • Input / Output Functions

	• Variables Variables Data Structures: - • Python Data Structures • Lists • Tuples • Functions

Class 03	Data Structures: -
	
	• Python Arrays
	
	• Sets
	
	• Dictionaries
	
	• Data Frame Loop & Condition:
	
	  • Loops (for, while)
	
	  • Python Conditions (if,elif,else)
	
	Discussion on Important Libraries: -
	
	• NumPy
	
	• Pandas
	
	• Vaex
	
	• Matplotlib
	
	• Seaborn
	
	• Scikit Learn
	
	• Keras
	
	• TensorFlow
	
	• Pytorch

Module 02: Regression & Feature Engineering (Part 01)	
Class 04	All About Single Variable Linear Regression: ▪ What is Linear Regression? ▪ Uses of Linear Regression in Real Life. ▪ Straight Line ▪ Curve Line ▪ Slope ▪ Intercept ▪ Math: In Depth Intuition of Linear Regression ▪ Cost Function ▪ Lose Function ▪ Mean Absolute Error (MAE) ▪ Mean Squared Error (MSE) ▪ Minimizing the Cost: Gradient Decent Algorithm ▪ Create Data Set in CSV Format ▪ Analysis Data with Matplotlib ▪ Implement Single Variable Linear Regression with Python and Real Dataset ▪ Future Value Prediction ▪ Assignment (Real Data Set)
	Feature Engineering: ▪ Different Types of Variables ▪ Work with Categorical Variables ▪ Measure of Central Tendency-

Class 05	▪ Mean ▪ Median ▪ Mode ▪ Theory of One Hot Encoding ▪ One Hot Encoding with Python ▪ Theory of Label Encoding ▪ Label Encoding with Python ▪ Theory of Ordinal Encoding ▪ Ordinal Encoding with Python ▪ Mean or Target Encoding ▪ Mean or Target Encoding with Python ▪ Assignment (Real Data Set)
Class 06	Feature Engineering: • What is Feature Scaling? • Techniques of Feature Scaling in Machine Learning • Theory of Normalization • Normalization with Python • Standardization • Standardization with Python • Theory of Robust Scaler • Robust Scaler with Python • Theory of Logarithmic Transformation • Logarithmic Transformation with Python

	• Theory of Reciprocal Transformation • Reciprocal Transformation with Python • Assignment (Real Data Set)
Class 07	All About Multiple Variable Linear Regression: • All about Gradient Decent in ML • Linear Regression with Gradient Decent • Math Behind Multiple Variable Linear Regression • Handle Missing Values with Python (Mean & Median) • Implement Multiple Variable Linear Regression with Python and Real Dataset • R Squared Value • Implement R Square with Python • Simple ML Project: Future Profit Prediction Based on Previous Data • Introduction to Kaggle.com & How to Download and Use Data Set from Kaggle.com • Assignment (Real Data Set)

Module 03: Classification & Feature Engineering (Part 02)	
	Introduction to Classification Algorithms: All about Decision Tree • Basic Logarithmic Operations.

Class 08	• All about Tree. • What is Decision Tree Algorithm? • What is Entropy in Decision Tree? • What is Information Gain? • What is Gini Index? • In Depth Mathematics Behind Decision Tree. • Implementation of Decision Tree with Python. • Visualize and Download Tree. • Assignment (Real Data Set)
Class 09	Result Analysis: • Theory of Confusion Matrix. • Confusion Matrix with Python. • Accuracy. • Precision. • Recall. • F1-Measure. • Specificity. • AUC Curve. • ROC Curve. • Assignment (Real Data Set). • Project on: Cardiovascular Diseases Prediction using ML

Class 10	All about Ensemble Algorithms: • What are Ensemble Techniques in Machine Learning? • Types of Ensemble Techniques. • Theory of Random Forest. • In Depth Mathematics Behind Random Forest. • Random Forest with Python. • Decision Tree Vs Random Forest • XGBoost Classifier • AdaBoost Classifier Hyper Parameter Tuning in Machine Learning: • Random Search for Classification • Grid Search for Classification • Genetic Algorithm
Class 11	Logistic Regression: • What is Logistic Regression? • What is Sigmoid Function? • In Depth Mathematics Behind Logistics Regression Algorithm. • Logistic Regression with Python • Linear Regression Vs Logistic Regression • Simple ML Project: Heart Attack Prediction with Python & ML • Assignment (Real Data Set)

Class 12	Feature Engineering: • What is Feature Selection in Machine Learning? • Theory of Principle Component Analysis. • Principle Component Analysis with Python. • Different Types of Feature Selection Methods. • Theory of Chi Square Test. • Chi Square Test with Python. • Select KBest. • Select kBest with Python. • Correlation Matrix. • Correlation Matrix with Heatmap. • Assignment (Real Data Set).
Class 13	All about K-Nearest Neighbors: • What is KNN Algorithm? • Euclidean Distance Formula. • KNN for Classification. • KNN for Regression. • In Depth Mathematics Behind K-Nearest Neighbors (KNN) Algorithm. • KNN Regressor vs KNN-Classifier. • Tuning: KNN Regress and KNN Classifier • Implementing KNN with Python • Assignment (Real Data Set

Class 14	Important Statistical Analysis: • Hypothesis Testing (Type 1 & Type 2 Error. • What is Analysis of Variance (ANOVA)? • Example of ANOVA Test. • What is T-Test? • Example of T Test. • ANOVA Vs T-Test. • P Value, T-test, ANOVA When to Use What, Implementation with Python. • Z Score Statistics. • All About Correlation Analysis. • Normal Distribution • Removing Outliers
Class 15	All about Cross Validation: • What is Cross Validation in Machine Learning? • Cross Validation Techniques. • Theory of K Fold Cross Validation. • Hold Out Cross Validation • K-Fold Cross Validation • Leave One-Out Cross Validation (LOOCV) • Stratified K Fold Cross Validation • Train Test Split Vs K Fold CV. • Assignment (Real Data Set).

Class 16	All about Support Vector Machine: • Theory of Support Vector Machine (SVM) in Machine Learning. • Hyperplanes and Support Vectors. • Math Behind SVM. • SVM Kernels • Assignment (Real Data Set) • SVM for Linear Data • SVM for Non Linear Data • SVM Implementation with Python.

Module 05: Basic Natural Language Processing (NLP)

Class 17	Feature Engineering: • What is Feature Extraction Techniques? • Bag of Words Model in NLP. • What is Count Vectorizer? • Count Vectorizer with Python. • What is Tfidf Vectorizer? • Tfidf Vectorizer with Python. • What is Hashing Vectorizer? • Hashing Vectorizer with Python. • What is Word2vec? • Word2vec with Python. • Countvectorizer vs Tfidfvectorizer vs Hashing • Uses of Vectorizer in NLP. • Use of Natural Language Toolkit in NLP (NLTK) • Lemmatisation in NLP • WordNetLemmatizer in NLP • Stemming in NLP • PorterStemmer in NLP • Assignment (Real Data Set)

Class 18	All about Naïve Bayes: • What is Bayes Theorem? • Statistics & Probability • Statistics & Probability with Python • Naïve Bayes Algorithm • Naïve Bayes Algorithm with Python • Naïve Bayes for Text Classification • Gaussian NB, Bernoulli NB, MultiNomial NB • Simple ML Project: Spam Comments Classification with Python • Assignment (Real Data Set)

Module 06 : Unsupervised Learning	
Class 19	Cluster Algorithms: • What is Unsupervised Learning? • Types of Clusters. • Theory of K-Means Cluster Algorithm. • Single & Multiple Variable Cluster. • K-Means Cluster with Python. • Hierarchical Clustering. • Optimal Number of Cluster Selection. • Elbow Method.

	• Elbow Method with Python. • Simple ML Project: Market Basket Analysis. • Assignment (Real Data Set)
Module 07: Deep Learning	
Class 20	Neural Network: • All about Neural Network • Tensorflow vs Pytorch • What is Deep Learning? • Types of Neural Network • What is Neuron? • Human Brain Vs Artificial Neuron • All about Artificial Neural Network (ANN) • All about Convolutional Neural Network (CNN) • Kernels, Relu, Convolution • Data Augmentations

Module 08 : Unsupervised Learning	
Last Class 21 (Guidelines)	Guidelines: • Scope of Higher Studies in Data Science. • Guide to be a Good Programmer. • Sharing Experience for Data Science Journey. • Machine Learning for Future Research. • R for Data Science. • Kaggle Competitions. • ML Jobs, Resume & Salary. • ML Interview Questions 2021
